

a

● peak of each curve

Apparent carbon-use efficiency, $G / (G + R)$

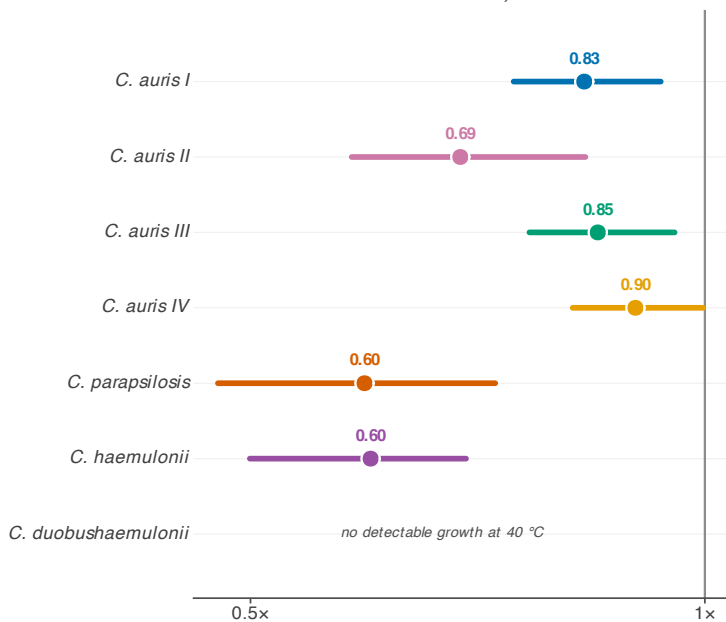

**b**

● CUE optimum (95% CrI) □ growth optimum · isolates

**c**

● hierarchical estimate · isolates ◆ median among 40 °C growth-positive ○ isolate without growth at 40 °C

Growth-rate retention, 37→40 °C

R/G change, 37→40 °C
